KTR said, “The journey has begun. It’s time now to focus on social and rural innovation that can make a deeper impact on society and solve problems of a common man.”

India’s largest startup incubator T-Hub, which has completed two years of its operations on Sunday, is in the process of launching the world’s largest incubator facility in Hyderabad by next year.

Addressing a gathering of entrepreneurs, investors and representatives of industry associations and companies on the eve of two years of completion of T-Hub’s operations, IT and Industries minister KT Rama Rao said, “The journey has begun. It’s time now to focus on social and rural innovation that can make a deeper impact on society and solve problems of a common man.” T-Hub has not only created a platform for startups that are operating in the incubator but also has helped several startups operating outside of it. It has also enabled the creation of several incubators in Hyderabad. The city today hosts 17 incubators, making the largest incubator hub in any city.

KTR said, “ICRISAT created iHub, a creative space where agricultural technology entrepreneurs, scientists and experts can collaborate to innovate cutting edge technologies that help farmers improve productivity and income. The city also witnessed establishment of health incubators including the one backed by LV Prasad Eye Institute- Srujana, which focuses on technology innovations in the ophthalmology space. Through T-Hub, we want to enable creation of sectoral technology disruptions.

T-Hub has led by example for the country how public private partnership can boost entrepreneurship. Telangana government and the three primary institutions- IIIT Hyderabad, ISB and NALSAR finalised and worked towards the common goal of creating a large incubator that will propel innovation. The incubator which has begun its journey as a co-working space has evolved to become a platform that helps startups scale up by providing the access to investors, mentors and markets. Read more..
